

InnWinWin implementation & Constitution of information

ABOUT THE COMPANY

The Instituto Superior Técnico (IST)' mission is to contribute for the society development, promoting a high-quality education in the Engineering, Architecture, Science and Technology areas, regarding the graduate, postgraduate and life-training levels and also developing research, development and innovation, essential for the advancement of knowledge and to deliver an education at the highest international standards.

SCOPE OF THE PROJECT

Consulting services within the Organization and Management of the several campus and universal residences' maintenance, including InnWinWin license, software configuration and equipment' registration.

Expected impacts:

-  Have a complete and updated equipment' inventory
-  Control of the work and allocated resources to the Maintenance department.
-  Improve the communication between the building managers and the Maintenance department by implementing the Work Request module.
-  Optimization of Maintenance costs.

The use of InnWinWin software allowed the systematical organization of all IST Maintenance department activities, through the registration of all the equipment and the respective maintenance activities' information. For this matter, the software is functional and very intuitive, through menus with an accessible graphic design and complementary between each other, allowing the users an easy comprehension of its operation. At the Alameda campus, where the equipment is dispersed in a total built area of 112314 m², corresponding to 23 buildings, controlling the maintenance activities will only be possible through this management tool, which also incorporates a dimension of costs and ration efficiency. – Eng.º Gilberto Lopes, **Coordinator of IST Maintenance Department**
