

Press Release . 30th August 2016

ManWinWin Software reinforces presence in the Middle East

ManWinWin Software has a new client in Saudi Arabia, Alstom Arabia Power Factory (AAPF), a world-class manufacturing facility focused on producing power generation components. The company hired ManWinWin Software's solutions to improve maintenance performance and handle all quality, security and environment demands.

The implementation project took place in King Abdullah Economic City, in Saudi Arabia, where the company currently holds a massive facility producing power generation equipment, primarily efficient heat recovery steam generators with minimal fuel consumptions.

The AAPF is a joint venture between Alstom and Arabian Bemco Contracting Co. Ltd and assuring an optimized maintenance system is one of the company's major priorities.

ManWinWin Software was the chosen solution to solve the challenges in that field, in a restructuring process that started by collecting all the information spread around several locations and centralizing it all in ManWinWin, in order to start managing all maintenance requests from one single platform, automatically improving maintenance performance and assuring compliance with all legal demands.

The implementation process was led in field by a Senior Consultant from ManWinWin Software, who proceeded with importing client's information, configuring its tailored maintenance settings, updating equipment database, creating maintenance plans, as well as preventive and corrective work orders, reporting templates, stock management and automatic e-mail notifications to all interested parts.

With this new major project, ManWinWin Software achieves another great step towards the Middle East market, where it foresees a significant growth over the next few years.
