

# ManWinWin *Smart Tag*

TOTAL MOBILITY IN  
MAINTENANCE MANAGEMENT

**MANWINWIN**  
SOFTWARE

IMPROVING MAINTENANCE • SINCE 1981 •

**VERSION 1.0**  
MAY 2018

ManWinWin Smart tag is a Web application that through scanning QR Codes or NFC Labels allows you to perform maintenance tasks directly on Assets recorded in CMMS ManWinWin.

Any user with proper access can use a smartphone or a tablet to scan the label, which automatically opens the Asset's datasheet, its main technical features, a photo and work options for Clients and Maintenance Technicians.

## Clients

- Select Maintenance Requests and report problems with the Asset. Just describe the malfunction and record the request.
- View all work that is Scheduled, In Progress or in the Asset Maintenance History. Allows to monitor, in real time, the performance of scheduled maintenance.

## Maintenance Technicians

- Record breakdowns or non-systematic preventive maintenance with details of the resources used. The work registered here can be in the programmed, open or finished state.
- Access the list of work that needs to be carried out in this equipment, actually carry out the work and record all the resources used: man-hours, materials or third-party services

This is a very useful feature ... not only it makes the entire maintenance management process much easier, it will guarantee that the technician has, in fact, been at the equipment and, very important, everything works completely paperless.

*"Everything that happens in ManWinWin Smart tag is updated directly and in real time in CMMS ManWinWin database"*
